1200: MyND Talk: American History Fault Lines Julian Zelizer : If you were asked when America became polarized, your answer would likely depend on your age: you might say during Barack

Obamas presidency, or with the post-9/11 war on terror, or the culture wars of the 1980s and 1990s, or the Reagan Revolution and the rise of the New Right. For leading historians Kevin M. Kruse and Julian E. Zelizer, it all starts in 1974. Archive 03-07-2019

1230: MyND Talk: A Man and His Career Keith Morgan : At a time when finding an African American man in the technical world of TV was fairly unique - Keith found himself working with the noted Ted Koppel of ABC-TV. His story is an important lesson in not listening to what you "can't" do and pursuing what you want to do. Archive 03-11-2019

1300: **CATSKILL REVIEW OF BOOKS:LUBRICATING THE WHEELS OF HISTORY :** Ian Williams talks to Christine Sismondo about her book "America Walks into a Bar." Despite the Orwellian hole of Prohibition, the bar played a formative role in American History. Archive 08-14-2011

1330: **CATSKILL REVIEW OF BOOKS:THE BUTCHER'S BILL: BROKEN BODIES SHATTERED MINDS :** Ronald Glasser talks to Ian Williams about the medical cost of war. Archive 08-21-2011

1400: Conversation Earth: Relocalization may be the most important strategy for minimizing climate change. According to Bill McKibben, working as communities is the most important thing that we can be doing right now. In this wide-ranging conversation about the sustainability of our civilization, McKibben shares his thinking about much more than climate change, including the fact that having more is not necessarily the key to our happiness. Bill McKibben has played a major role in public awareness and discussion about climate change. His 1989 book, *The End of Nature*, was likely the first book for a general audience about climate change. He is one of the founders of the planet-wide, grassroots climate change movement, 350.org, he spearheaded resistance to the Keystone Pipeline, and launched the fossil fuel divestment movement. 1430: Conversation Earth: Our computer-generated scenarios all showed this growth stopping in the early decades of the 21st century, and, I must say, looking back now, it seems that we're right on schedule. Dennis Meadows led the team at MIT whose computer simulations led to the publication of the top-selling environmental book of all time " *The Limits to Growth*. Scientists built on Jay Forrester's pioneering system dynamics work to chart future trends of five variables, analyzing how they would influence one another. The five variables were world population, industrialization, pollution, food production and resource depletion. Their World3 computer model's business-as-usual scenario did not paint a rosy picture, and many economists and industrialists criticized the study harshly. Our work challenged the foundations of modern economic theory. It made life for politicians very uncomfortable, and threatened corporations who were looking to increase their markets. So, all of them, especially the economists, really lit out after our work, and criticized it roundly. In recent years, several studies have confirmed that the standard-run scenario turned out to be remarkably accurate. This may offer an explanation of the growing list of environmental crises and the inability of the global economy to maintain the robust growth rates experienced earlier. Archive 08-28-2016

1500: Counterspin: Marcie Kever on oil spill, Alessandra Soler Meetze on Arizona SB 1070. Archive 04-28-2010

1530: Counterspin: Gabriel Arana on immigration, Ron Daniels on Henry Louis Gates. Archive 05-05-2010
